

KEY FEATURES

- Heavy-duty steel frame
- Easily assemble and disassemble
- Telescoping function
- Stabilizes the track
- Ensures safe job site application
- Product weight: 60 lbs.

TranzSporter

The TranzSporter Telescopic Support Brace by Tie Down Roofing is an accessory part for the TranzSporter ladder hoist. The Support Brace helps hold the track in place and stabilizes the system. This support component bolts directly onto the track and helps ensure a safe application lifting between 250 lbs. and 400 lbs. of material to the roof. The TranzSporter ladder hoist helps workers move shingles to the rooftop while eliminating the risks of doing it by hand or on the back. The hoist and track section assemble easily. The foot pedal and handle brake controls allow for easy and straightforward use while keeping workers safe with the safety mechanisms preventing falls. An optional 4' or 8' track extension can be added to the ladder hoist, allowing a maximum height of 44'. Tie Down Safety maintains high standards and quality controls using quality raw materials and component parts made in the USA.
